

KOBON's Granular Activated Carbon

KOBON's activity granular activated carbon manufactured by steam activation from selected grades of Coal. The product is a high density adsorbent and provides maximum volume activity.

The material is water washed during manufacture and therefore wets rapidly. It exhibits a high adsorption capacity giving prolonged adsorption cycles, which coupled with low steam consumption rates during the regeneration cycle, results in a low total operating cost and low resistance to flow with liquids of high viscosity and good quality for Deodorization, Decolourization, Dechlorination, Removal organic compound.

Model	Based			Iodine No.(min.)	Activation		Type			Size (mesh)
	Coconut	Coal	Wood		Steam	Chemical	Granular	Extruded	Powder
